

# 

## Illustrate your world with industrial precision

- All-in-one graphic design and technical illustration software
- Comprehensive vector illustration and image editing tools
- Work in extraordinary detail with 0.035 micron accuracy
- Share projects in a wide variety of layouts and formats
- Helpful built-in Canvas Assistant and dynamic help

## Application Overview

### Smart Toolbox

Have the current tool and any related tools right at hand. Resize or lock your tool palettes so that they are always available.

### Dimensioning Tools

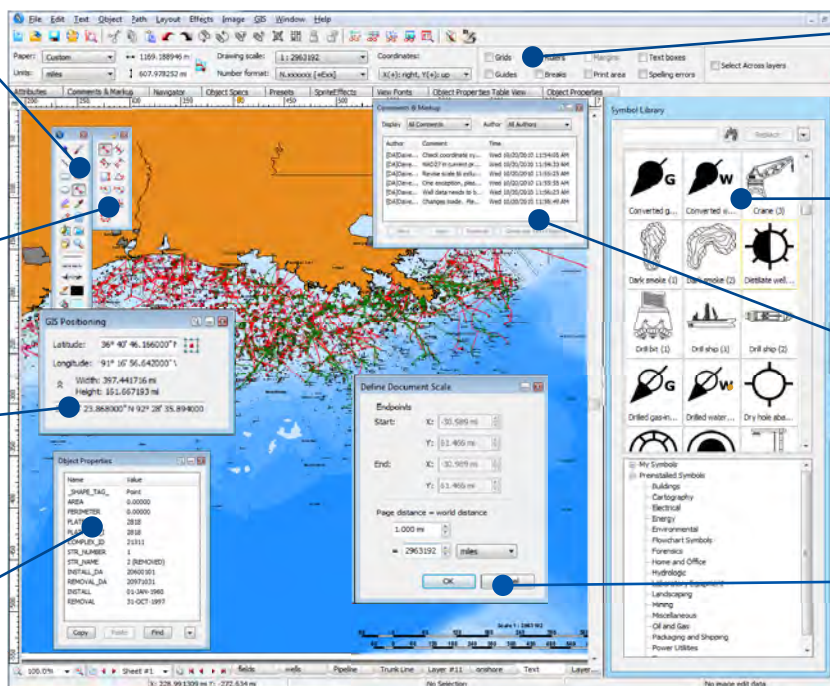

Automatically measure objects using both metric and English units.

### Intelligent Feedback

Get precise feedback on your data, whether in microns, miles, or GIS coordinates.

### Object Properties

Displays the coordinates and associated attributes found in many GIS objects.

### Properties Bar

View the most relevant settings and options at all times.

### Symbol Library

Create custom symbols and easily organize new Canvas symbol sets.

### Comments/Markup Palette

Facilitate document reviews by sharing comments or indicating corrections.

### Drawing Scale

Scale, adjust, resize or customize workspace to reflect new project specifications.

**canvas™ XGIS 2019 Top New Features**

## Tables

Create tables for your data: components, changes, parts lists, legends, and more. Easily create, customize, and add to tables.

Copy and paste data straight from Excel<sup>®</sup> and other sources.

Food #	Type	Quantity	Calories	Protein
1	Onion	3	41	1.3g
2	Eggplant	1	198	4.7g
3	Tomato	5	22	1.1g
4	Yellow Pepper	2	50	1.9g
5	Pasta (Type 1)	79	210	7.4g
6	Pasta (Type 2)	141	180	7g

## Automatic Annotations

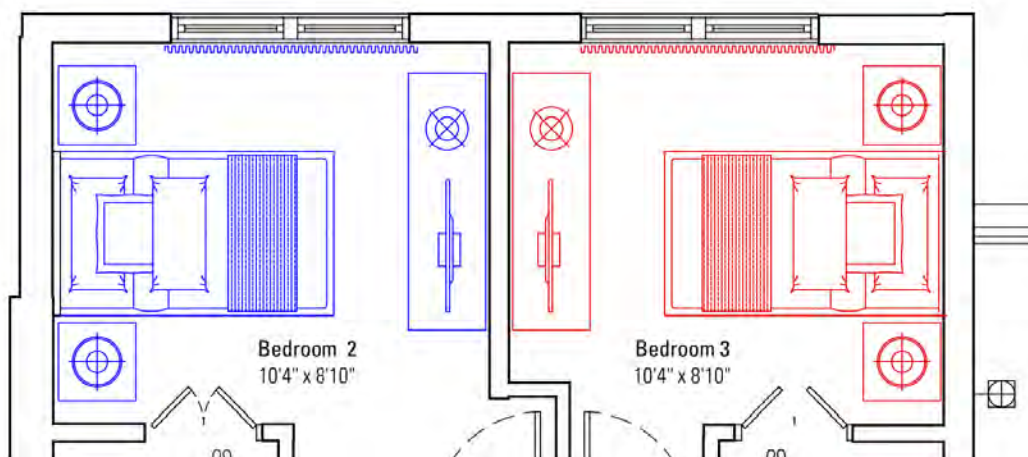

Annotation Notes now supports auto-numbering and auto-alphabetizing.

Use an EasyShape like a circle, rectangle, or diamond shape for annotations.

## Mirror Tool

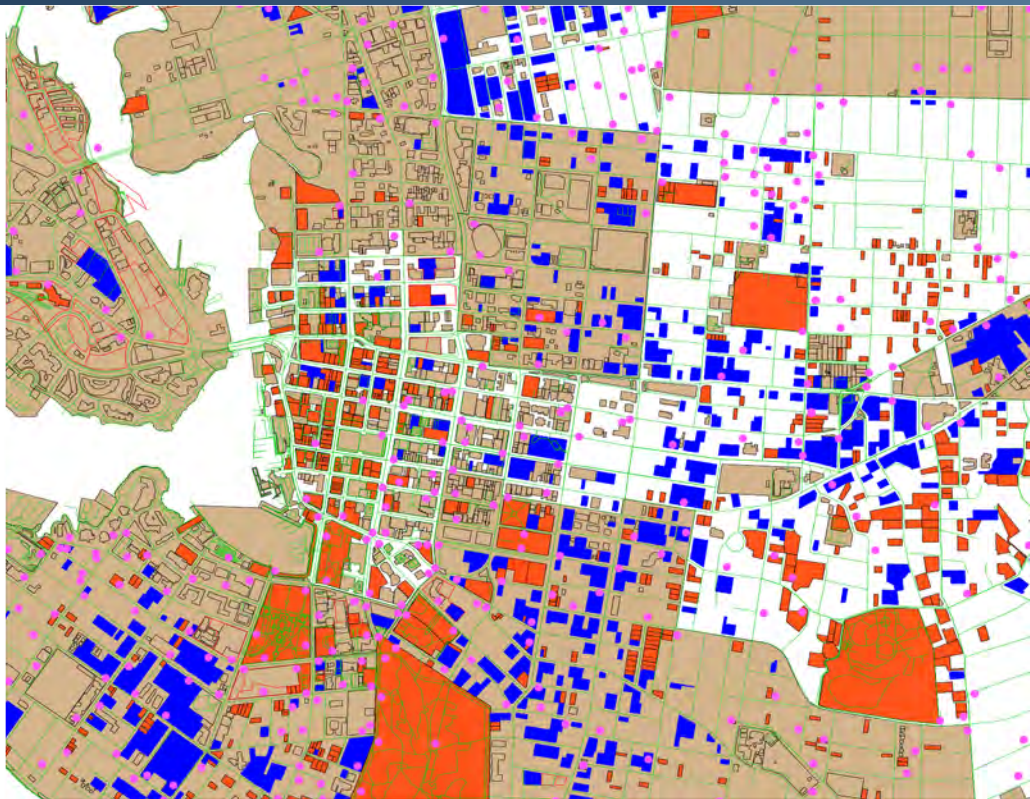

Mirror will make a reverse copy of selected objects in 2 clicks. The mirroring axis can be drawn or snapped to other objects and rotated freely.

 canvas™ XGIS 2019 Top New Features

## Select by Location

Select features based on spatial relationships with other features to highlight geographically-calculated places of interest.

## Geoprocessing Tools

Geoprocess like a GIS guru with new geoprocessing tools like Difference, Intersect, Symmetrical Difference, and Union.

**Difference:** The input layer is what is erased.

**Intersect:** Cuts out an input layer with the extent of a defined feature boundary.

**Symmetrical Difference:** Opposite of intersect.

**Union:** Spatially combine two data layers.

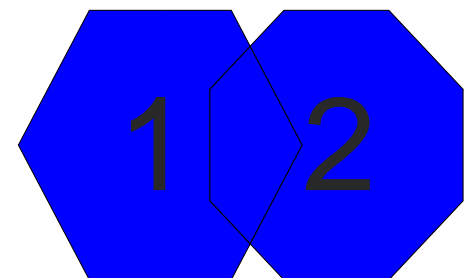

Difference

Intersect

Symmetrical  
Difference

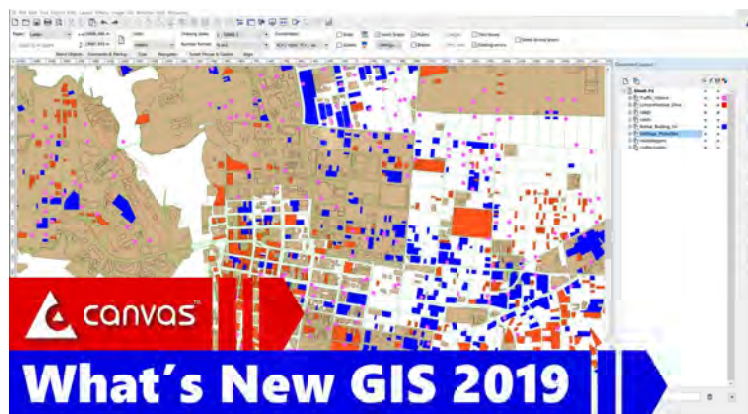

Union
